

Traceability and transparency – important aspects in BAP/BSP certification programs

Nguyen Thi Thanh Binh
Vietnam Country Coordinator, Global Seafood Alliance
VIETFISH 2022 – August 24, 2022

A world that embraces the role of responsible seafood in meeting global nutrition needs.

The Global Seafood Alliance (GSA) is an international non-governmental organization dedicated to promoting responsible seafood practices through education, advocacy and third-party assurances.

WHAT WE DO

WHAT'S DRIVING CERTIFICATION?

- Consumers have become increasingly aware and concerned about the foods they buy.
- Buyers and/or retailers have corporate responsibility missions, and certification helps them to demonstrate how they are fulfilling that mission.
- Industry organizations and governments have become involved in requiring/promoting certification as a way to achieve improvement goals.
- NGO's frequently highlight in the press, sometimes in an unbalanced way, problems in the global seafood supply chain.

WHAT'S DRIVING CERTIFICATION?

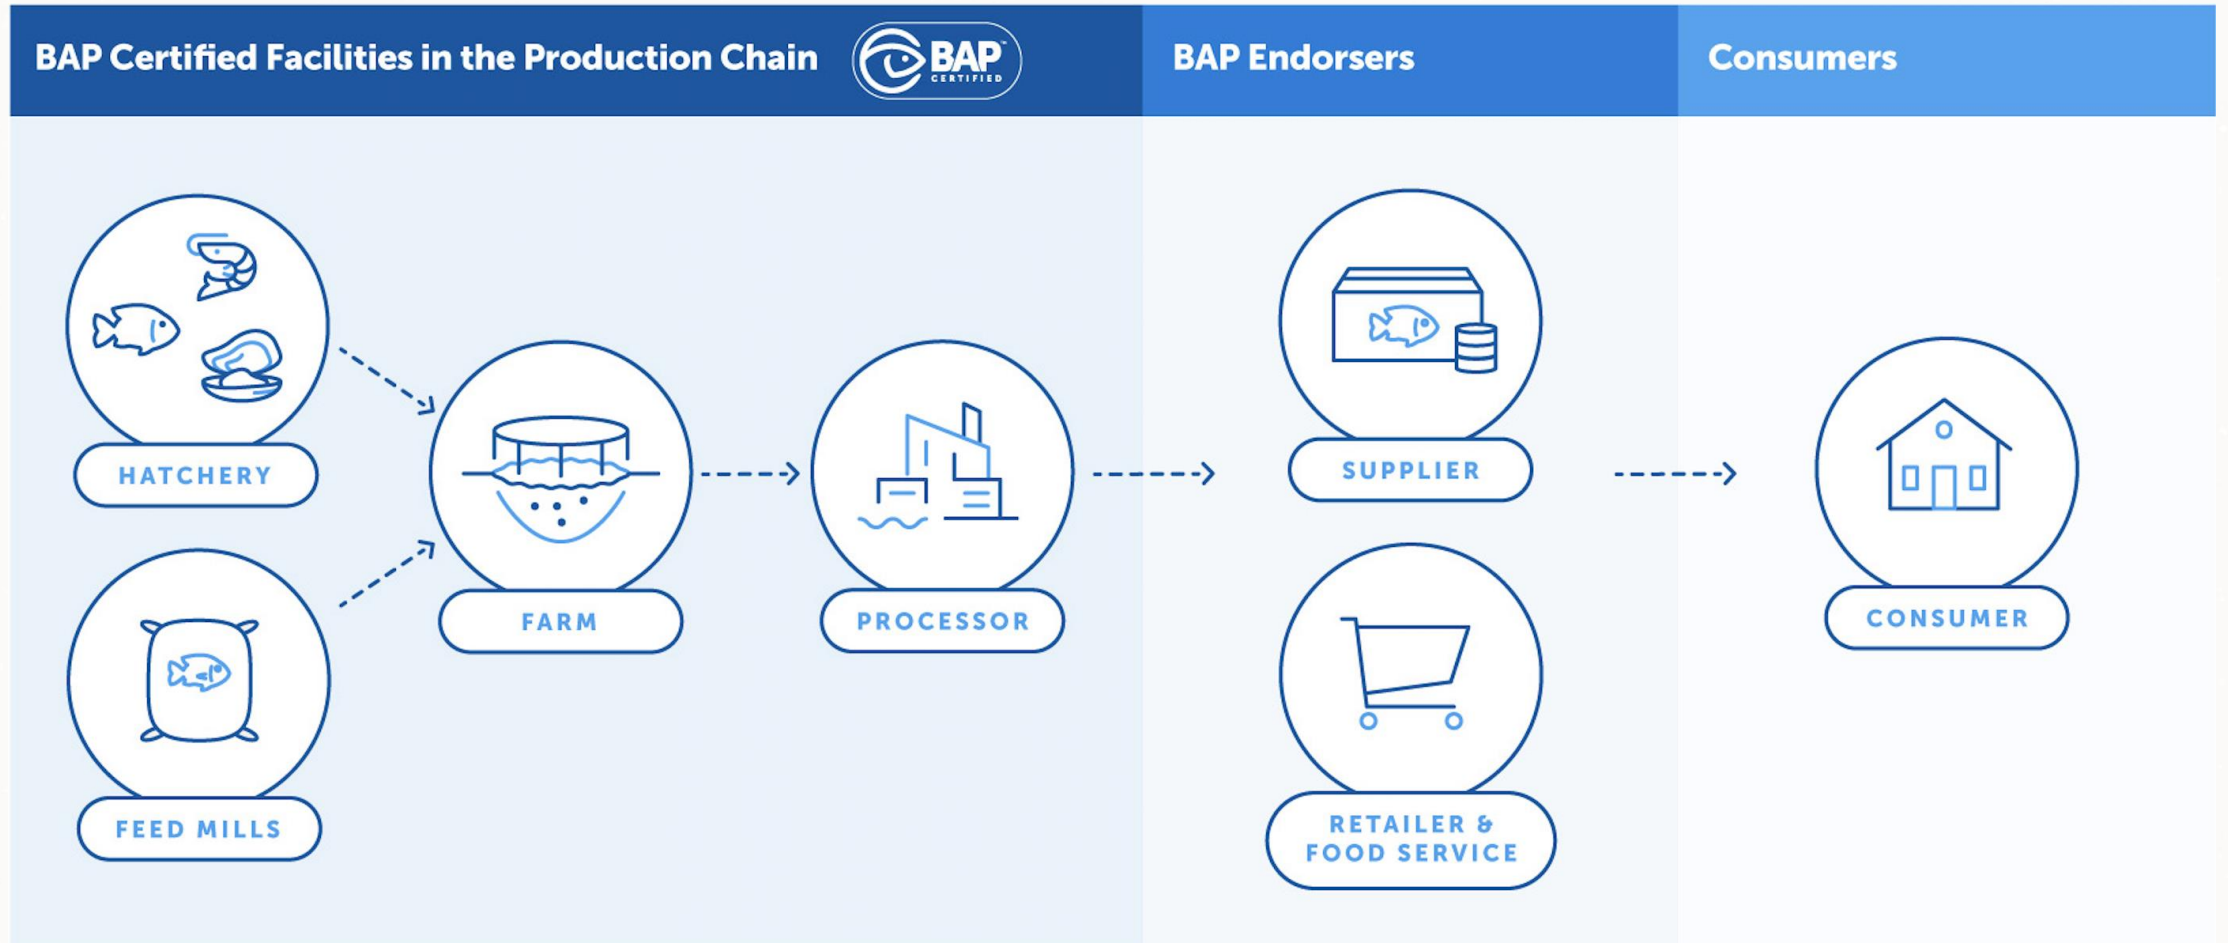

- Buyers want to have assurances that the products that they acquire from those supply chains consistently meet the guidelines, specifications, or expectations they have specified.
- By requiring that their suppliers achieve third-party certification according to international standards, buyers mitigate the chance of those products exposing them to such risks.

CERTIFICATION PROGRAMS OVERVIEW

AQUACULTURE SUPPLY CHAIN

BAP STAR SYSTEM

Each star on the BAP logo represents a different part of the aquaculture production chain. A 4-star designation is the highest rating achievable.

1-Star Logo

Product produced by a BAP-certified processing plant

★ Processor

CERT # P12345

bapcertification.org

2-Star Logo

Product produced by a BAP-certified processing plant and BAP-certified farm(s) only

★ Processor

★ Farm

CERT # P12345

bapcertification.org

3-Star Logo

Product produced by a BAP-certified processing plant, BAP-certified farm(s) only and BAP-certified hatchery and/or feed only.

★ Processor

★ Farm

★ Feed

CERT # P12345

TRANSPARENCY – HOW TO FIND A BAP CERTIFIED FACILITY?

bapcertification.org/Producers

The following is a list of all BAP-certified farms, hatcheries, feed mills, and processing plants (both processors and re-processors). The lists can be sorted or filtered by country, producer type, or species, or the search field can be used to help identify a specific producer. The supply chain linkages of certified processing plants can be observed by rolling the cursor over their listing in **Star Designation** column in the **Certified Producers** table below.

The BAP program allows processing plants to communicate the chain of custody certification status of certified facilities through use of a **Star Designation** labeling system on packaging of finished products. Since processing plants may receive product from both BAP certified and non-certified farms, the Star Designation system shown on the BAP website listing is only intended to show the maximum Star Designation that a processing plant is **capable** of producing (e.g. 1-,2-,3- or 4-Star BAP). The actual star status logo that can be used on packaging varies, depending upon the characteristics of the source farm material. Having a 4-Star Designation displayed on the BAP website does NOT imply that 100% of a processing plant's production qualifies to be labeled with a 4-star logo. Please refer to the [BAP Logo Use Requirements](#) document for a more complete explanation: [Program Integrity Library](#)

WHAT IS THE SUPPLY CHAIN TRANSPARENCY PROGRAM?

A **free** interactive risk assessment tool designed to identify opportunities and strengths within the full supply chain.

- **SCT gives insight that can help grow your business**
 - Improved visualization of multi-star production chain
 - Showcase your production chain to the market
- **Data analysis for plants and the BAP program**
 - Improving quality of multi-star links
 - Mass balance
 - Identifying gaps in supply to drive growth
- **SCT is something no other certification program offers**

CHAIN OF CUSTODY STANDARD

- What it is: The purpose of this standard is to provide additional assurances to the marketplace related to BAP star status at the end of the supply chain.
- Who it's for: This standard is available to facilities that re-pack or label farm-raised BAP certified product.
- Why we do it: This standard ensures that there is no mixing of BAP certified and non-certified product, no mixing of products of different BAP star status, and that the correct BAP facility number is clearly visible on final packaging.
- Current status: This standard is currently in draft status and awaiting pilot testing.

WHY BSP?

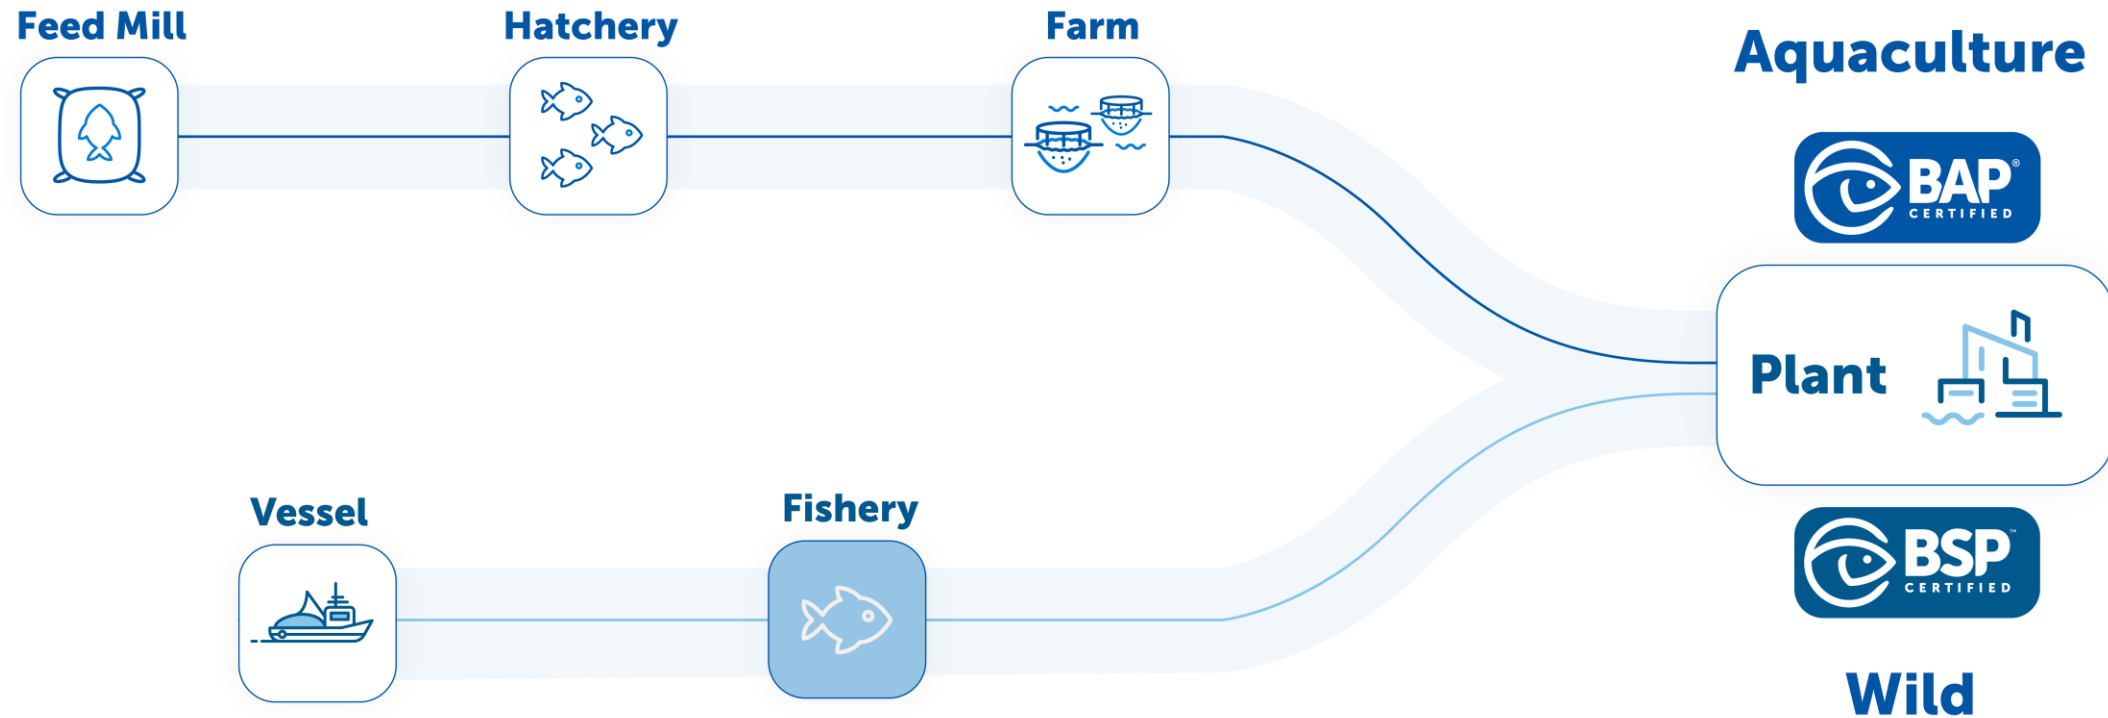

Ensuring responsible practices throughout the wild seafood supply chain

The BSP program provides a more comprehensive approach that takes crew rights, food safety and environmental responsibility into consideration throughout the entire supply chain.

Our goal is to use expertise and innovative tools to provide customized solutions that work for the marketplace and wild seafood supply chains, delivering a comprehensive set of assurances no other single program can provide.

A world first...

This month an Australian fishing vessel has been certified to the [Global Seafood Assurances](#) Responsible Fishing Vessel Standard, an initiative which aims to improve labour conditions and crew welfare.

"This is a huge credit to their skippers and crews and testament to the fact that many of our partners set the benchmark for best practice across the global fishing industry," says [Marine Stewardship Council](#) CEO Rupert Howes.

The vessel, Antarctic Discovery, belongs to Australian Longline Fishing, which operates in an MSC certified Patagonian and Antarctic Toothfish fishery: <https://lnkd.in/d89jJs>
